

March 21st, 2011

Dear Trigemini Customer,

We are excited to announce Trigemini Advanced with B12 a new and improved formula of the product that you love. New clinical evidence has shown that Vitamin B12 and Folic Acid may help to reduce the frequency and severity of migraine attacks. In an effort to make Trigemini products even more effective we have added Vitamin B12 and Metabolin, a patented form of Folic Acid, to our already effective formula.

In addition to the addition of two new powerful ingredients we have switched from capsules to tablets making it possible for you to get all of the clinically proven doses of the ingredients that make Trigemini so effective in just FOUR tablets. Now you only need to take two tablets with breakfast and two with dinner to get the same results you got from SIX capsules of Trigemini original formula.

We look forward to your feedback on these developments, and we strive to make Trigemini the best Head Comfort formula available.

Be Well,  
The Trigemini Team
